

AMERICAN CAR CRAFT INSTRUCTION
CHALLENGER LOWER GRILLE OVERLAY BRUSHED 11-12

PART # 152016 patent pending

PARTS INCLUDED:

- 1-Stainless Lower Grille
- 2-Adhesive Promoter Packs

Your new grille overlays have been designed to attach directly to the stock grille offering a beautiful enhancement of the factory design.

Your grille comes to you with a protective liner. Do not remove liner until installation has been completed.

1. Thoroughly clean the factory grille first with soap and water then with rubbing alcohol to remove any road grime and dirt. Once properly cleaned, take a piece of household masking tape to test the tack by sticking the test tape strip to the areas where you will be mounting your new overlay. Test several areas, if it is tacky and sticks then proceed to the next step. If it is not sticking very well in any of the spots you tested then re-clean the area until the test strip sticks to all areas. PLEASE NOTE: If the test strips tape doesn't stick well then neither will your new grille.
2. Now using the adhesive promoter (provided) swipe the clean grille and painted area where you will be attaching the grille. Take special care to apply the adhesive promoter to the entire grille surface. This will insure the new overlay will remain bonded under all weather and road conditions long term. The promoter is clear and will not stain or damage your paint.
4. Now that the factory grille has been properly prepared - Without removing the rear red liner place the grille overlay in position to get acquainted with just how it will set in place. The attachment tape on back of the grille overlay is very aggressive and will not allow you to reposition it once it sticks so go slowly. Once you are confident that you can place the grille correctly remove the rear red release liner from the back of the overlay and carefully and gently set in position. Make any tiny final adjustments. Now press firmly along the entire surface to set the new grille overlay permanently.
5. After the grille has been successfully installed remove the protective liner.

NOTE: The lower grille section has been designed as a brushed part so as to allow the grille to be seen. Since the factory grille faces slightly downward a polished grille will simply disappear in its reflection so a brushed grille has been created to compensate for this problem.
