

## Basic Installation Instructions/ Custom Installation

The Killer Glass kit comes with the glass, shrink clamps, LED, wire harness, voltage regulator (small black or White in-line tube on wire) **DO NOT REMOVE this.**

**We strongly recommend using a new radiator hose for a positive seal, used hoses are impregnated with lubricant from the antifreeze that can cause the hose to loosen**

Locate where you want the Killer Glass; give enough room for the rubber hose to allow the motor to have enough room to flex under braking & torque. **We like to leave approximately an extra INCH at both ends for the rubber hose. So it can really move around.**

The glass is extremely strong however glass does not flex, that's the reason for the hose, the more the better. We recommend replacing your old hose with a new one for best results.

This new LED system is designed to make the LED replicable if you want to change the color or add additional LEDs for wild effects such as faders, strobes etc.

Line up the wire first to get the shrink clamp (big tube) to look like below before heating. **After this slide LED away from the shrink tube.**

Next page

Now apply heat to shrink the clamp with the hairdryer/heat gun takes about 5 minutes. So don't rush it and **do not overheat the clamps so that they melt.**

The clamps are dynamic tightening meaning each time you use the car the heat makes them tighter.

Start the car & let it come up to operating temp then let it cool down to assure a tight seal. After that you can slide the clamp in place securing it by tightening the wire tie with the LED attached.

Why you want to do is avoid heat from the hair dryer on the LED, hairdryer/heat guns can reach 550 degrees, the LED is stable to 350 degrees, much more then engine operating tempatures

Wire it up to any power source you like, a switch works best, Red = positive, black = Negative Again, **DO NOT** remove the black voltage regulator tube in the wire harness it will burn out the LED.

Addition LEDs are available for \$30 each, Additional shrink clamps are \$10 each. + Shipping

If you have any questions whatsoever on how to install this feel free to get in touch with us.
